Pr(Theory|Experience) = Pr(Experience|Theory)* Pr(Theory)/Z

Theory: Spiritual or Paranormal experience is "real"

Beyond the Mundane Brain

- Human history has many stories of life which do not fit the model of individual brain as the only intelligence. But they seem impossible in a simple model.
- Personal experience forced me to become openminded in March 1967: I remembered and quoted a speech of Mao Tse Tung the day before it was given! (See Greeley 1969: 70% of PhDs have had personal experience they do not discuss.)
- Two intense new directions:
 - Scour literature from "schools" all over the earth for ways to expand my first person database, because more and richer experience is needed to explain all this. Also use neural network model to guide this.

There are levels & levels of consciousness, & we now know the mathematical principles for understanding & replicating them.

Can we learn to pay more attention and be far more effective? What is the barrier? Claim: we can; the main barrier is the gap by G.H. between symbolic & subsymbolic thought.

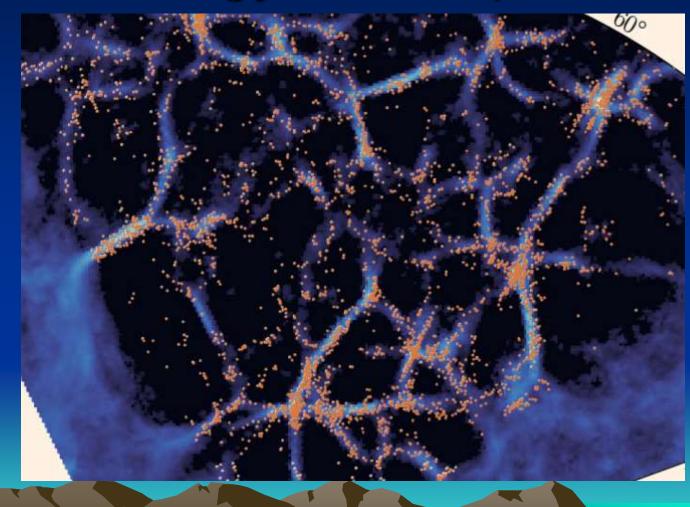

The Big Question Here.....

If we believe paranormal effects are real *And if* we believe that everything is ruled by mathematical laws of nature ("physics") *Then* what do we do about it? How can we improve our understanding?

QED REMOTE VIEWING

- Quantum effects Are Not Enough
- Additional Force Fields?
- But if so, where is signal processing(SP)?
- <u>A radical chasm</u> -- extreme choices; give up remote viewing totally or else:
 - "cables" & SP in the universe
 - esoteric biology or "soul," symbiotic biology and intelligence
 - but either way, what about genetics?
